HAPPYSALUS
WELLBEING & LONGEVITY

The Healthcare Issue

Growing aging of population that, on the other hand, want to keep fit and healthy with ever greater awareness

Transformation of Welfare with strong privatization of healthcare and need for cost containment. In Italy only, 15 mio people gave up medical treatments

Prices for private healthcare covers are dramatically high as companies lack detailed and specific customers' profiles

700.000 App Health

Diabetes, cardiovascular diseases and respiratory diseases, are the main causes of death after cancer in the EU.

More and more «self-care» stand alone and incomplete solutions

MEGA-TREND

Making healthcare affordable for everyone

1. Monitoring
2. Algorithm
3. Engagement
4. E-market place

Happysalus is one of the most innovative M-Health system aimed at improving people's quality of life through constant and continuous self-monitoring of some health parameters reducing their key health risks .

The active prevention of health risks and personalized consumer profiling allows people to live better and safer thanks to personalized alerts, tips and health paths.

Market Target B2B2C e B2C

- Home Care

MEDICAL DATA AND ALERT

BIG DATA INTERPRETATION

CUSTOMIZED WELL-BEING

Happysalus: the Healthcare SmartCities:

The tools, both wearable and home, are EEC certified and equipped with wireless data transmission technology. They are generally provided in the form of differentiated kits for pathological propensity or for those who want to improve their lifestyle and well-b

Wearable

- Fitness
- Heart Rate
- Sleep Analysis
- Pressure Measurement
- Blood oxygenation
- Breath frequency
- Steps and counts calories
- Functions integrated with smartphone
- Fitness functions

Kit Lifestyle

Impedance scale (Fat body scale)

- Body weight
- Lean mass
- Fat mass
- Body water
- % skeleton
- BMI

Medical kits for pathologies

Composed of 2 or 3 elements of which a wearable and at least a specific device for diseases:

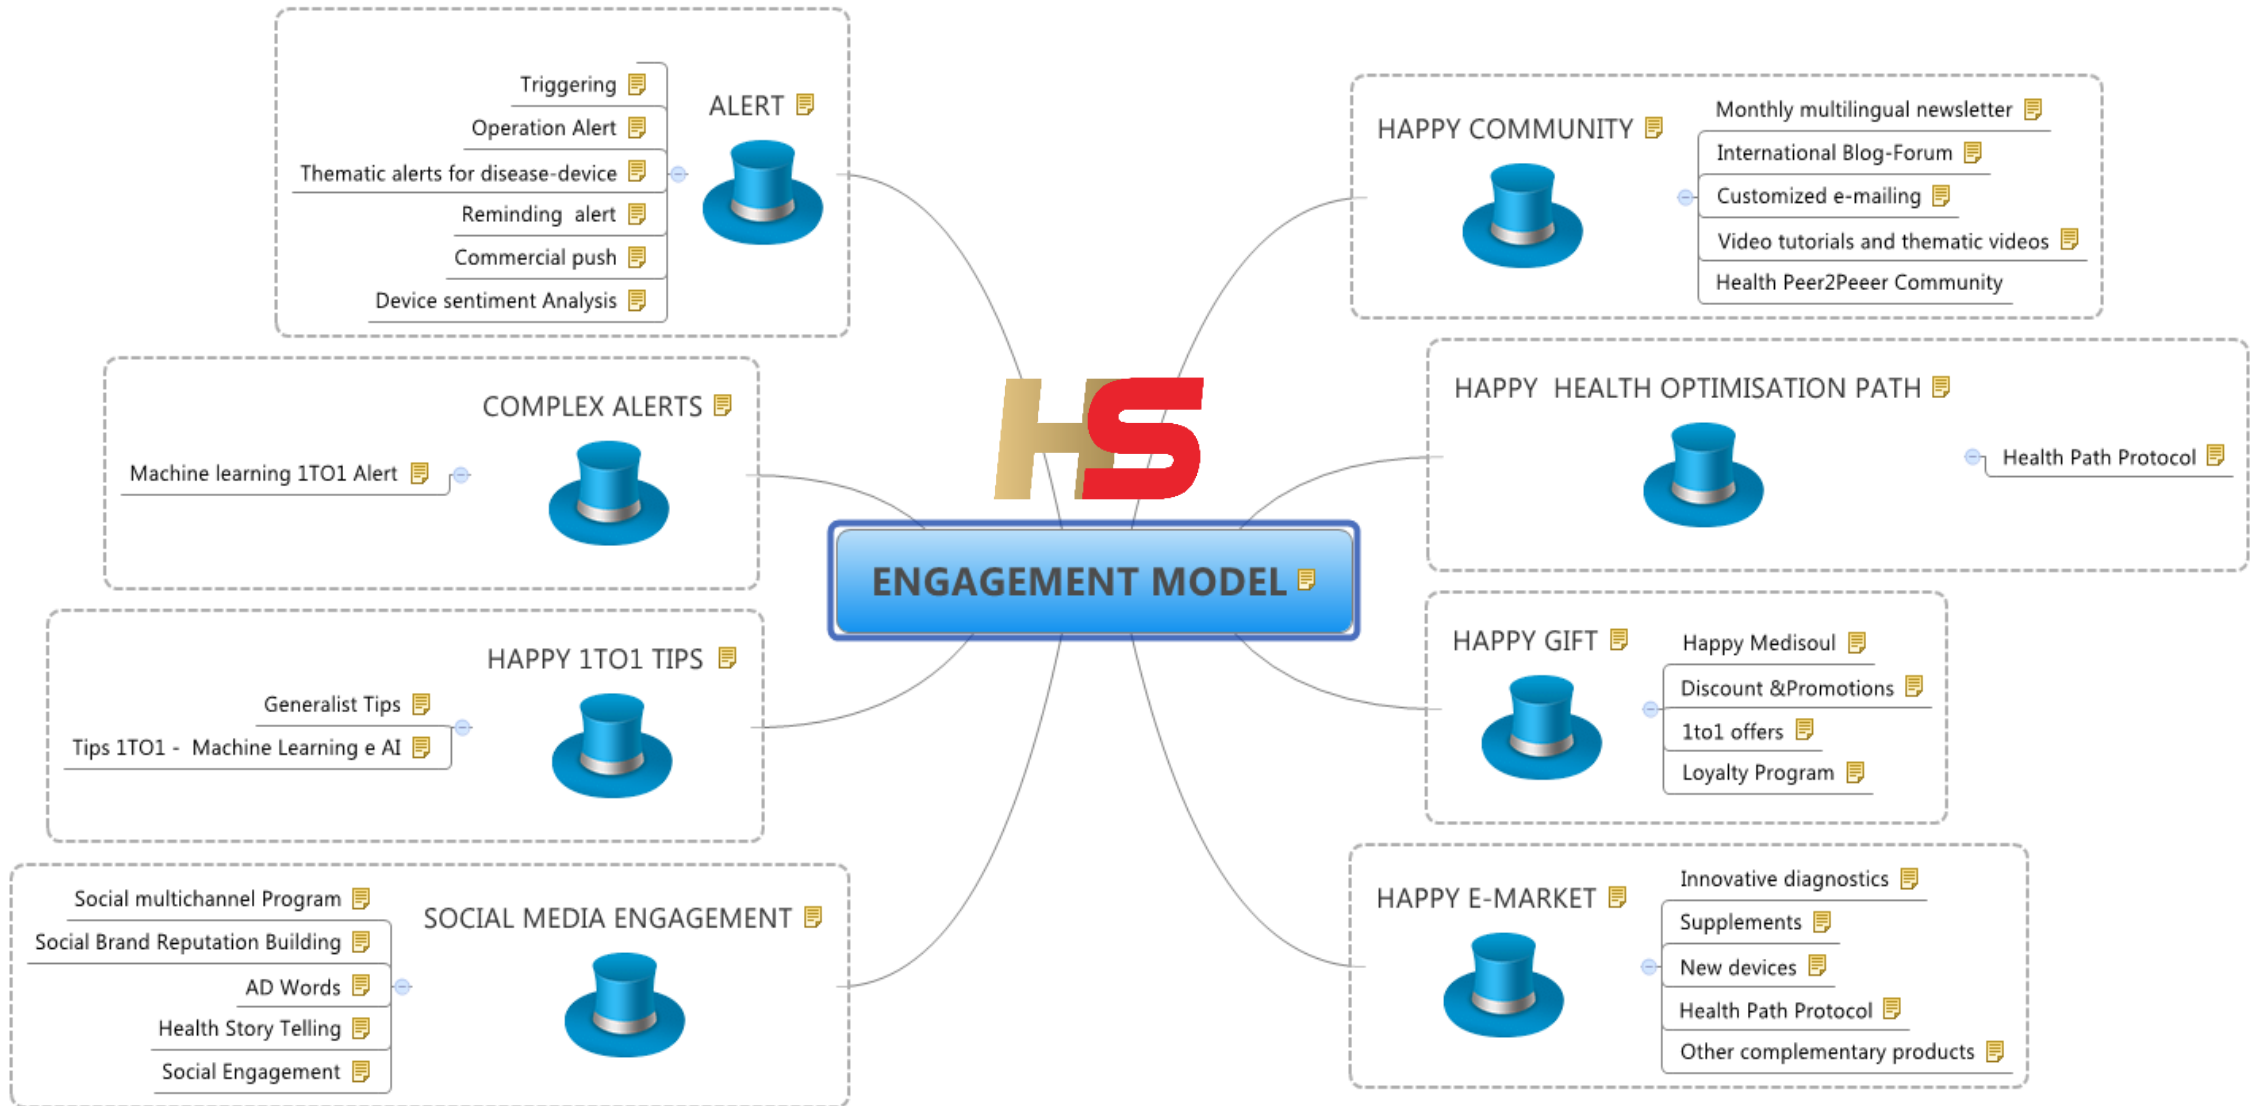

- Cardiovascular
- Respiratory
- Diabetic

- Monitoring from devices,
- Lifestyles, e-commerce and social
- Anamnestic questionnaires, clinical data, surveys and medical reports

- Health Path and self-awareness for customers
- AI, Big Data and profiling behavior clients...
- Reporting B2B
- Engagement system

E-Commerce

E-commerce represents the natural evolution of the customer data analysis; in fact, following the Big Data Interpretation processes, it is possible to offer to the customers customized commercial offers based on their actual health needs.

In a first phase (at least 12-18 months) the Happysalus e-commerce platform will sell to customers :

- a) Innovative and prevention-oriented medical visits and analyzes: redoxomics, genomics, lipodomics, telomeric
- b) Health paths (protocol) of well being and longevity
- c) Medical devices in replacement and / or integration
- d) Supplements
- e) Customized Insurance

Subsequently, based on specific surveys, **the commercial offer will be extended to the whole health world:** fitness, micro-insurance, medical visits, organic food, home, etc.

R A C E

The Human Artificial Intelligence Engine that Healthia Srl will deliver on the Happysalus platform was developed with the support of the Inuit University Research Foundation and the MIT - Massachusetts Institute of Technology

It has already been extensively tested in clinical and hospital settings with great success.

Developed with a proprietary Lisp, it is able to distinguish more than 100.000 pathological sub-populations.

The experiments have been carried out on cardiovascular, diabetic and oncological fields even if, being a deep learning system, it is self-learning and educable for multiple medical purposes.

The motor can be fed with anamnestic data, biophysical data coming from our devices, the medical records and genetic polyformisms identified through a basic genetic examination.

**Prof. Gianni Spera**

Chairman of the Ethics Committee.
Responsible for algorithms and
development of predictive medical
modules

**Prof. Giovanni Scapagnini**

Responsible for development of
supplements and predictive medical
modules

**Prof. Craig Wilcox**

Responsible for longevity development and
supplements development

**Prof.ssa Leila Baghernajad Salehi**

Alert and algorithmic development.
Biomedical research

**Prof. Eugenio Luigi Iorio**

Responsible for innovative diagnostic :
oxidative stress ossidativo and free
radicals

Set up by professors and internationally renowned researchers, it has as main goals to:

- Define and develop Happysalus' Alarm Algorithms,
- Develop self-monitoring Big Data algorithms to allow for disease prevention and promote well-being.
- Generate personalized healthcare protocols that can be purchased by end users.
- Support and promote Happysalus' engagement system.
- Identify and / or develop the most innovative medical devices.
- Develop tailor made supplements.
- Research for new markers for the major monitored disease groups, as well as, shortly, for oncological diseases.

Happysalus is the first service of the digital services line for people, service line called **Happyline** which also includes **HappyPet, Vet and Home** (Services dedicated to the home, currently development project) .

A new service for pets, dogs and cats, based on intelligent localization devices, which analyze the state of health of the animal up to the modulation of its diet.

A true ecosystem for pet care developed by the Happysalus team in collaboration with veterinarians, suppliers and top telecommunications players.

HappyPet will be launched on the market with Happysalus at the same time.

- Virtual fence
- Intelligent tracking
- Calories consumed
- Sound feedback
- Alarm
- Waterproof
- Daily goals
- Dosing food through connected dispenser

IT DEVELOPMENT:

- International platform implementation (Salus-Pet),
- Development of e-commerce platform,
- Data center development,
- Development of an evolved algorithmic interface and A.I.,
- Security, privacy and data protection.

R&D:

- Advanced algorithmic development,
- Development of prevention paths-modules (wellness, longevity)
- Identification and development / acquisition of supplements.

Marketing and Sales:

- Development of the international sales network,
- Digital and social marketing campaigns, PR, press and events
- Development of the loyalty and engagement program
- Customer support service.
- B2C market and launch new services.

ENRICO MALLONE
